The first mainframe-based CAD program was called DrawDraft, which was developed in 1969 at the University of Utah by John Goodman (founder and first president of Autodesk). His new program was a batch-based drawing program, which when run from its disk, entered a command-line mode for its graphics

subsystem. DrawDraft was originally developed as a student project in the early 1970s, and turned into a commercial product in 1976. In 1977 the company name was changed from University Software Company to Autodesk and the product was rebranded. DrawDraft was advertised as a "low-cost entry-level CAD system" suitable for mechanical draftsmen and mechanical designers. Over the next six years, the program

was upgraded and extended to include more powerful drawing capabilities, to satisfy the needs of the aerospace, chemical, and other industries. DrawDraft was not a high-end product for its time and was always a specialty product, targeted at mechanical designers and drafters. In 1982, Autodesk developed a computer-aided design program called DraftSight, which was a low-cost drawing and drafting package. AutoCAD Product

Key, a complete suite of CAD features, was also introduced in 1982 and was designed to be affordable and suitable for mechanical and architectural design. (From AutoCAD's "About" page) AutoCAD is the #1 selling CAD solution used by more than 55,000 people every day. From architects to engineers, AutoCAD has made a major impact on how people design. For any project, a combination of our software,

consulting services, support, and training provide the foundation for your success. The original version of AutoCAD was a command-line-driven program with no windows interface. The program was first released on February 16, 1983, and had two editions: AutoCAD Release 1.0 for MS-DOS was \$495 and Autodesk published AutoCAD Release 1.0. AutoCAD Release 1.0 featured several significant new features, including the ability to

rotate and flip two-dimensional drawings in any direction, the addition of dimension constraints, the implementation of the Dimension to Point feature, and the use of a preview window. This new version also added support for portable fonts and improved the alignment and detail of drawings. In the editor, it included an Undo command and a Quick and easy command. In February 1983, Autodesk

Isometric view - To view the drawing in the isometric view, the viewer should use the isometric set layer. The isometric view is the standard view for architects and engineers, with 90° , 180° , 270° rotations of the elevation and azimuth. In other words, as the elevation and azimuth in a horizontal plane, as a view angle of 90° elevation, and a view angle of

90° azimuth. Perspective view - For standard views, the eye level view of the model (using the perspective command). This is normally associated with the modeler in AutoCAD. For the CAD viewer, the current layer is set using the layer set layer.

perspective to view a model from a specific eye level. 2D Wireframe View - Also known as the "2D Wireframe" view, this is a view of 3D models that has all edges of the

model intersect with a single line.
Hidden lines - Lines in a drawing that are invisible to the viewer, and so are not displayed. Object - An Object represents a 3D model, or any kind of a system, feature, component, or thing in a drawing. Object types include dimensions, annotation, blocks, drafts, datums, dynamic blocks, dimensions, dimensions with profiles, fillets, freehand, polyline, profiles, guides, labels, lines, parameters, text,

tables, viewports, and other visible components. Reference - A reference provides a location for the insertion of a line, object, dimension, annotation, or other reference type. The most common reference types are dimensions, text, and blocks. Snap - The Snap function allows you to align two objects with the alignment lines of the two objects (for example, a top left corner and an area of the model can be aligned). When you

use the snap function, it is normal to align the objects first, then select the second object, then press the snap command on the keyboard. Text - Objects that have a text label. Text can be for any type of object, including dimensions, annotations, freehand, dimension style text, datum text, annotation text, and label text. View - Viewers are tools that display a drawing or part of a drawing to the user. Viewers

include the standard viewers that work with AutoCAD drawings, including AutoCAD Drafts, and the custom viewers created by AutoCAD software and AutoCAD Add-on Products. AutoCAD provides ca3bfb1094
