As such, the project has been and continues to be focused entirely on its users, most of whom are individual individuals who use the LibreOffice applications on a daily basis, each in different ways. There were and are many ways in which

users are able to get involved and contribute to the project. Contributors can apply for a place on the development team (the leader team is always under-staffed), or help in one of several other ways, including translations, mentoring, documentation, and support. How do you decide which features to implement? Every decision we make in the LibreOffice Project is based on user feedback, which we receive in many ways. We have an online forum at for example libreoffice.org, where hundreds of users discuss LibreOffice issues. In addition, we have more and more channels for communication, including #LibreOffice on Freenode IRC and #LibreOffice on StackExchange, and several mailing lists. Other activities which may also have an influence on our decisions include bug-reports from users, and about 25 000-odd regular monthly downloads of the LibreOffice applications. What are some of your goals and plans for the LibreOffice Project? Our main goals are to provide end-users with the best open-source office suite possible, and to ensure that that this office

[04:58]Natan I. Holder (author)Translating patient-reported outcomes into clinical practice: post partum depression in women. Postpartum depression (PPD) is a debilitating condition that affects women during the first 12 months after childbirth. Despite the prevalence and potential serious consequences of PPD, documentation of PPD is poor in most clinical environments. Further, there is a dearth of research on which to build evidence-based models of treatment for this condition. We therefore conducted a literature review to understand the potential causes of poor documentation of PPD. Three possible factors that contribute to poor documentation were identified: a lack of awareness of mental health issues postpartum; a misunderstanding of the clinical course of PPD; and the challenges of accessing treatment for women

with PPD. Suggestions for overcoming these barriers and translating PPD into clinical practice are described.namespace BizHawk.Emulation.Common { internal static partial class Syp { public static float R0 { get { return Emulator.Cpu.R[0]; } set { if (value >= 0.0f) { Emulator.Cpu.R[0] = value; } else { Emulator.Cpu.R[0] += value; } } } public static float R1 { get { return Emulator.Cpu.R[1]; } set { if (value >= 0.0f) { Emulator.Cpu.R[1] = value; } else { Emulator.Cpu.R[1] += value; } } } public static float R2
