AutoCAD is used to create engineering drawings such as design layouts, technical schematics, and shop drawings. The latest AutoCAD version can use graphical 3D rendering, and

works with external graphics and video cards. The new AutoCAD 2020 is based on a new drawing engine called AutoCAD R14 which is capable of rendering in three dimensions (3D), and significantly faster than its predecessor. A competent AutoCAD user can design a wide range of objects including electrical, mechanical, structural, and civil engineering drawings. AutoCAD can create 2D drawings of architectural objects. The software can use different templates to convert the architectural designs into mechanical and electrical

drawings. Degree of autonomy and handiness of use of the program. Level of sophistication of the data base which includes the database of objects and components, drawing sheets, and styles. Number of objects that can be created and modified. Total number of pages, shadings and patterns that can be created. Text formatting. Level of integration with other Autodesk packages.
