What's the difference between two way's to set a property  
What's the difference between two way's to set a property.  
What I want to do is I have a second thread that updates a  
property that the first thread is reading. I am new to  
multithreading. So please understand that I am not asking any  
kind of way to get the property or even if this is a bad practice  
I would like to know c6a93da74d
