ISMSRAT For PC

ISMSRAT is a documentation tool to support the Implementation of the ISMS-Framework under ISO/IEC 27001:2005 What is an Information Security Management System? Information Security Management (ISM) is concerned with assessing, identifying and treating security risks to business information, and to reduce those risks to an acceptable level through the implementation of security controls. It is important that the approach taken to ISM is appropriate to the business, and that the selected security controls are operationally effective in supporting business information processing. An Information Security Management System (ISMS) is a systematic approach to managing sensitive company information so that it remains secure. It encompasses people, processes and IT systems. ISO/BSI published a code of practice for these systems, which has now been adopted internationally as ISO/IEC 27001:2005. ISM projects are often carried out with the objective of achieving compliance / formal certification against BS 7799 / ISO 27001, either for competitive advantage, or to meet customer, supplier or other third party assurance requirements. Sanra's ISMS ♦ RAT (Documentation / Risk Analysis Tool) The ISMS-RAT application is a result of research and feedback attained from Lead Auditors, ISMS Lead Auditors Trainers and some Senior Level executives of the Companies in the process of implementation of ISMS under ISO/IEC 27001. Main Objective of the applications is to assist in the implementation of ISMS by offering a seamless set of procedures, policies, controls and assessment techniques with ease of use. Prospective Market ISMS-RAT is a software tool to help the organization to implement ISMS in their organization (commercial enterprises, government agencies, non-profit organization). Organisations who are planning or have just completed the training of their team and are ready to implement. Organisations practicing ISMS.
