The performance drop in Lr5.2 is not something that I have noticed in the beta releases. I am usually shooting in the 6000 to 10,000 range. When I compare vs. 5.1.2 it is very similar in performance.

Pretty please with sugar on top send me a beta let me test it out for you and send us your feedback. There is no reason for this performance drop.

Thank you as always.

Charlene Yep, I noticed you said that too, and I'm quite sure my studio is not at all representative of the world. I use the current LR periodically to look at my raw files, and I decide whether to create a new DNG right away, or whether to try to

adapt them if I think I can "swap in" a better result more easily. Maybe I'm a 1%er, but I actually pretty much only do my job (photography) on my 5D IMO. I want to create as much of my gallery as I can in Lightroom, to help it optimize itself for me.

The company's Adobe Sensei App was able to quickly add a neural network to help automate some very tedious parts of Photoshop's editing functionality. With Adobe Sensei, all of a user's edits are synced to the cloud, so there's no need for the user to log in to their Photoshop CC to access those edits. Adobe says it adds about 3 hours of effort to the iterative process of editing an image in Photoshop. As a standard feature present in most image editing platforms, we've now rolled out an intelligent clip and masking tool. You can use this workspace to select objects right from a browser-powered canvas without leaving the image preview. To select a layer, place your cursor just outside of a layer boundary and click.
